AI Commentary

In 2023, the United States emitted 4918.41 million tonnes of CO2 and 6078.45 million tonnes of GHG. The country's emissions decreased by 2.71 percent compared to the previous year. Data completeness is 90.91 percent, and emissions intensity is not available for this year.

INTERPRETATION: These figures represent the total measured carbon and greenhouse gas output for the United States during the 2023 calendar year. The year-over-year change indicates the fluctuation in total volume relative to the prior period.
